

Attachments for Zoom Booms

Zoom Boom Attachments - In the new millennium, Skyjack was acquired by the Linamar Corporation, who is LNR on the TSX, a leading producer of assemblies, precision-machined components and modules. At present, Skyjack has production plants in Canada, Hungary and the US with extra support offices in Asia and Europe.

The Skyjack trade name became the industry leader for aerial hoist machinery by combining features like for instance durability, quality and serviceability, making their very own scissor platform lifts known all around the world for product reliability and efficiency. Skyjack produces a lot of different self-propelled aerial lifts for its international client base. Their elevated work heights reach up to 56 feet. The company's current Boom hoist model series has telescopic booms ranging from 45 feet to 71 feet. Skyjack has plans to further extend their boom hoist product line. The company is still a leading player in the trade adjusting rapidly to the constantly evolving needs of all of their clients.

Recently, Skyjack purchased Carelift Equipment in August of the year 2007 and Volvo's Material Handling Equipment so as to try to expand their Telehandling product offering. The resulting Zoom Boom and VR series telehandlers along with the added production capability further guarantees the company's growth and success.

Skyjack is proud of their devotion to engineer reliable lift possibilities. Their goods are made, supported and sold worldwide.
