

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a tool constructed out of high quality materials meant to endure the most demanding procedures and work environments. This piece of equipment can enable drivers to maneuver the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the entire load or the arms in order to facilitate much more exact lifting and position in a faster and more effective way.

The only one of its kind blade pocket design can enable the person operating it to securely sway the unit's blades without any fear of damaging the positioning cylinders. This could allow the worker the option to either perform independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into fork positioners on existing units.
